

SUBTLE HAS NEVER BEEN SO **BOLD**

Fluorpon® Effects Kameleon colors by Sherwin-Williams offer pearlescent hues that appear to change when viewed from different angles.

YOU'RE NOT IMAGINING IT. THE COLOR JUST SHIFTED.

The innovative Kameleon system uses mica flakes to create a consistent iridescent, gradient look. A blend of ceramic and inorganic pigments creates an original, brilliantly subtle look that will turn heads for years to come. It's ideal for monumental high-rises, commercial and residential buildings.

ONE-OF-A-KIND EFFECTS. 70% PVDF FLUROPON PERFORMANCE.

- Same advanced protection as our 70% PVDF Fluorpon products
- Superior resistance to UV rays
- Outstanding color retention and consistency
- Excellent overall adhesion
- High durability — three-coat system
